Joe Bloggs and his records are made up

It started with getting sick.

The care was the easy part. The calls, bills, forms and referrals were not, and they all came on my worst days.

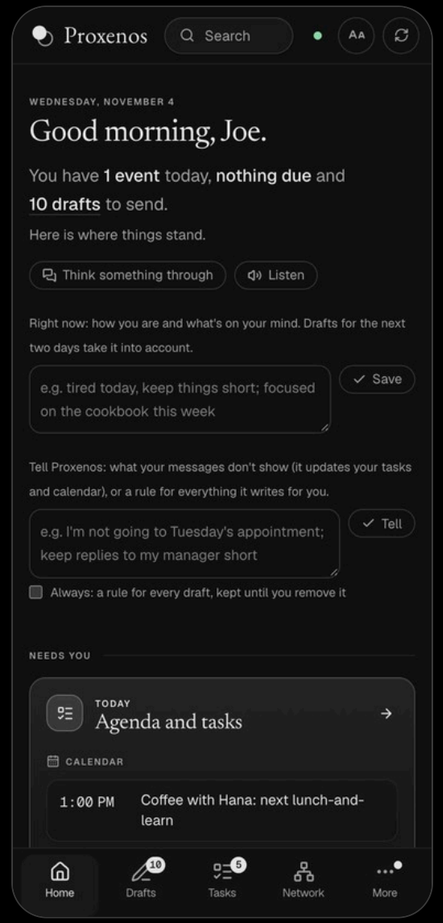

Sick or not, most of us have more threads than time.

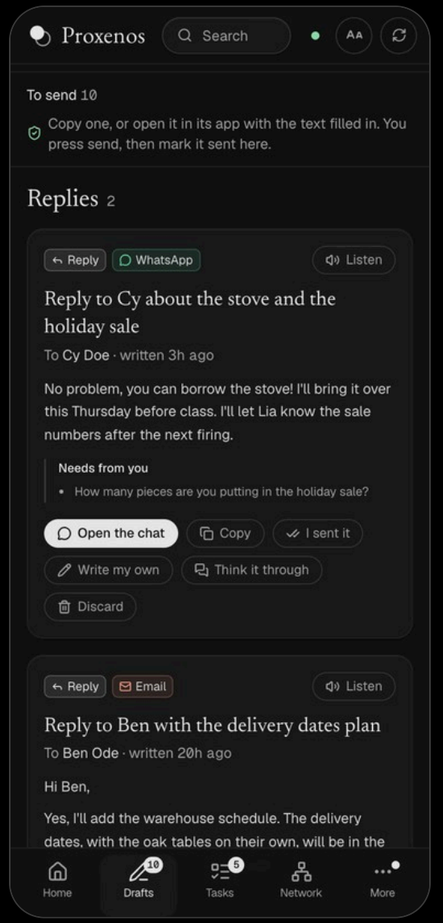

Meet Joe Bloggs

he's made up, and so is everything in the pictures that follow

- operations manager at Acme Furniture
- pottery class on Thursday evenings
- a short paper on getting holiday orders out on time
- new glasses, and a bill that doesn't add up

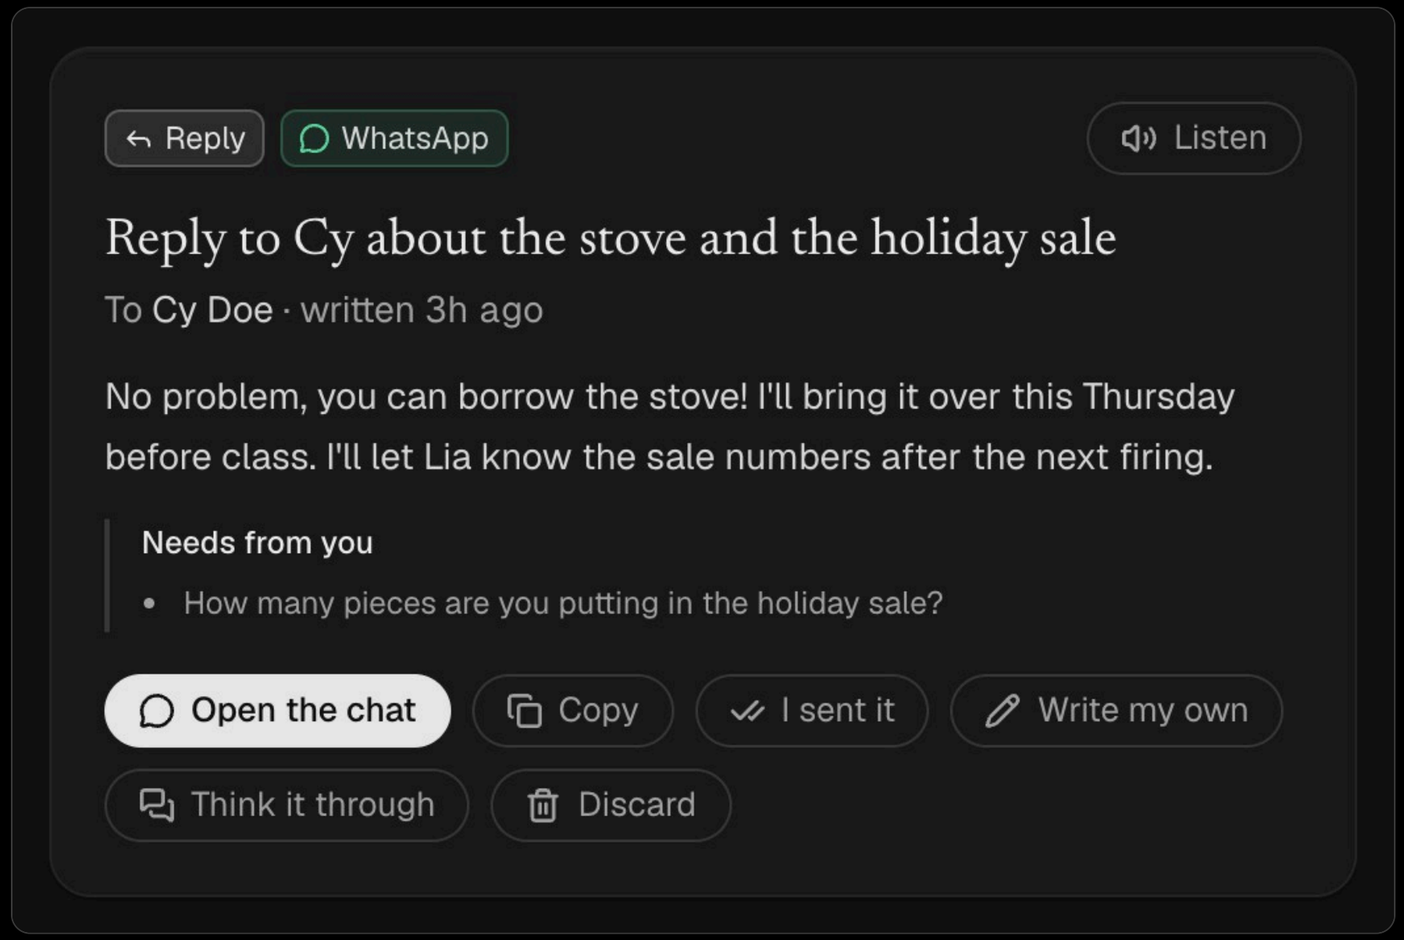

What you'll see is Proxenos itself, run on his records: his mail, chats, calendar and notes.

DRAFTS

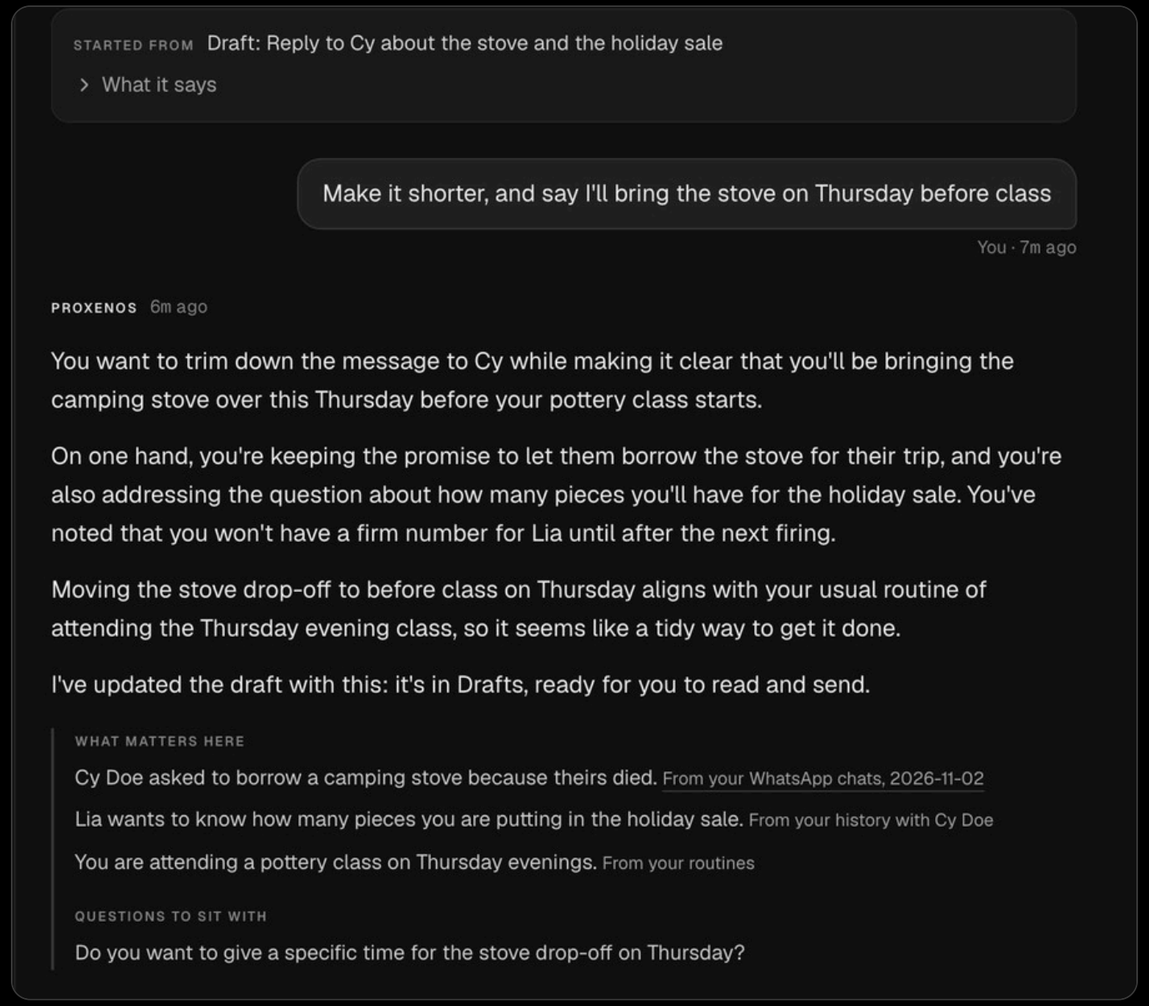

Cy wants to borrow his camping stove

- the chat is waiting on Joe, so a reply is drafted
- written the way he writes to Cy, from the chat and what he told Proxenos this week
- he copies it, or opens WhatsApp with it filled in, and sends it himself
- chats that need no answer get no draft

THINK

“Make it shorter, and say I'll bring the stove on Thursday before class.”

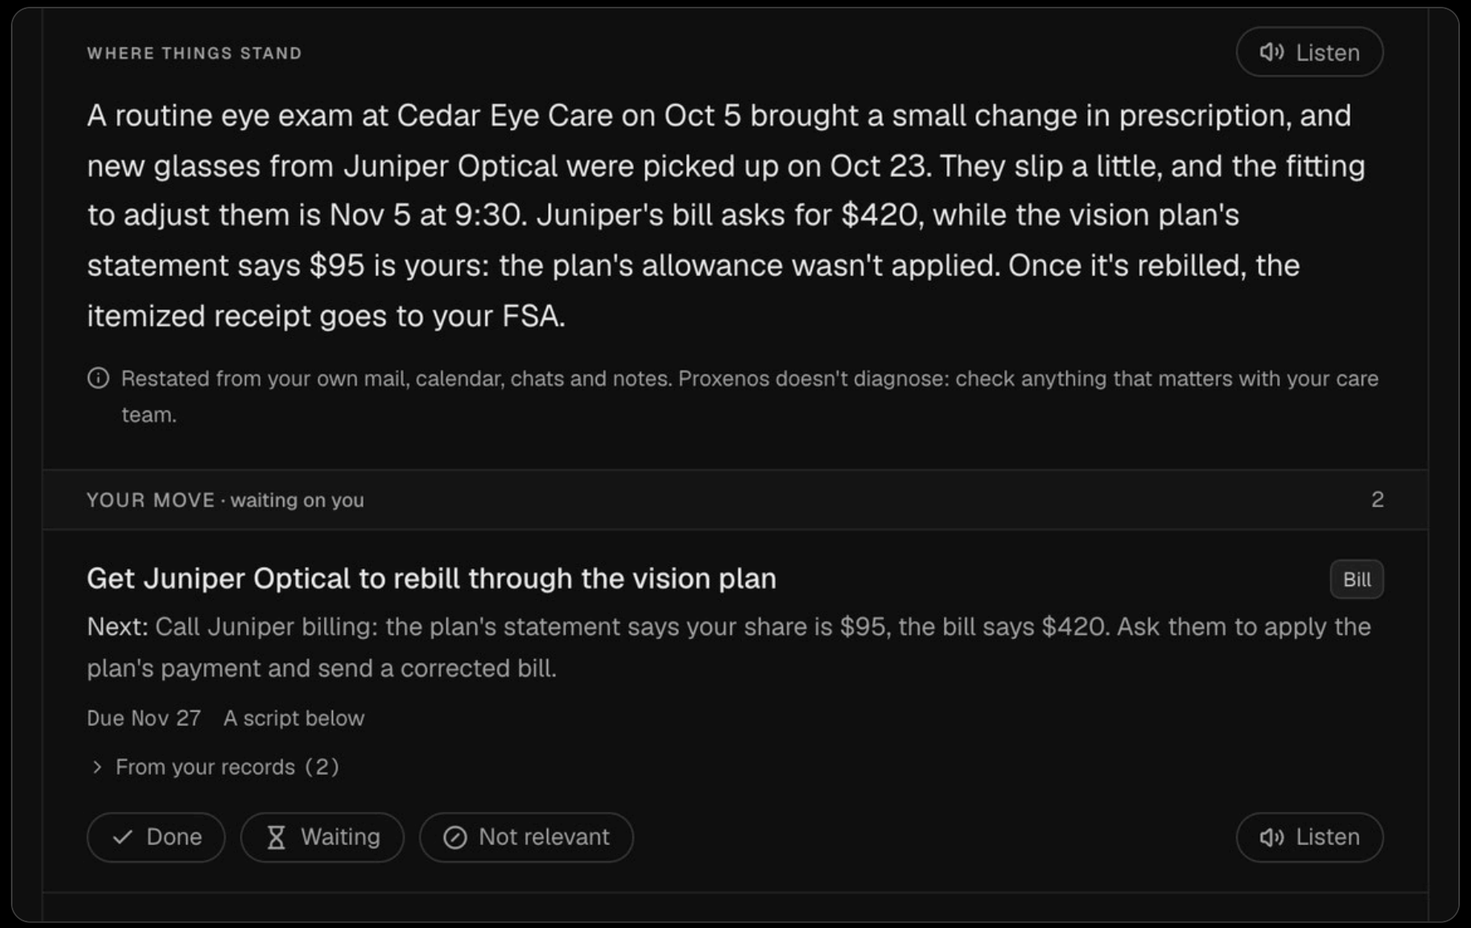

the draft, rewritten and saved as his own edit:

> No problem, you can borrow the stove! I'll bring it over this Thursday before class. I'll let Lia know the sale numbers after the next firing.

- it knew pottery is on Thursday evenings, from his routines
- each point says where it came from
- for a decision or a project too: it lays out the trade-offs, and never decides for him

CARE

The bill says $420. The plan says $95.

- where things stand, from his mail, calendar, chats and health records
- his next step, with a script for the call to billing
- a one-page brief for the next visit, medical terms in plain words
- it restates his records; it never diagnoses

OFFERS

Three contractors, side by side

a contractor to rebuild the back porch steps

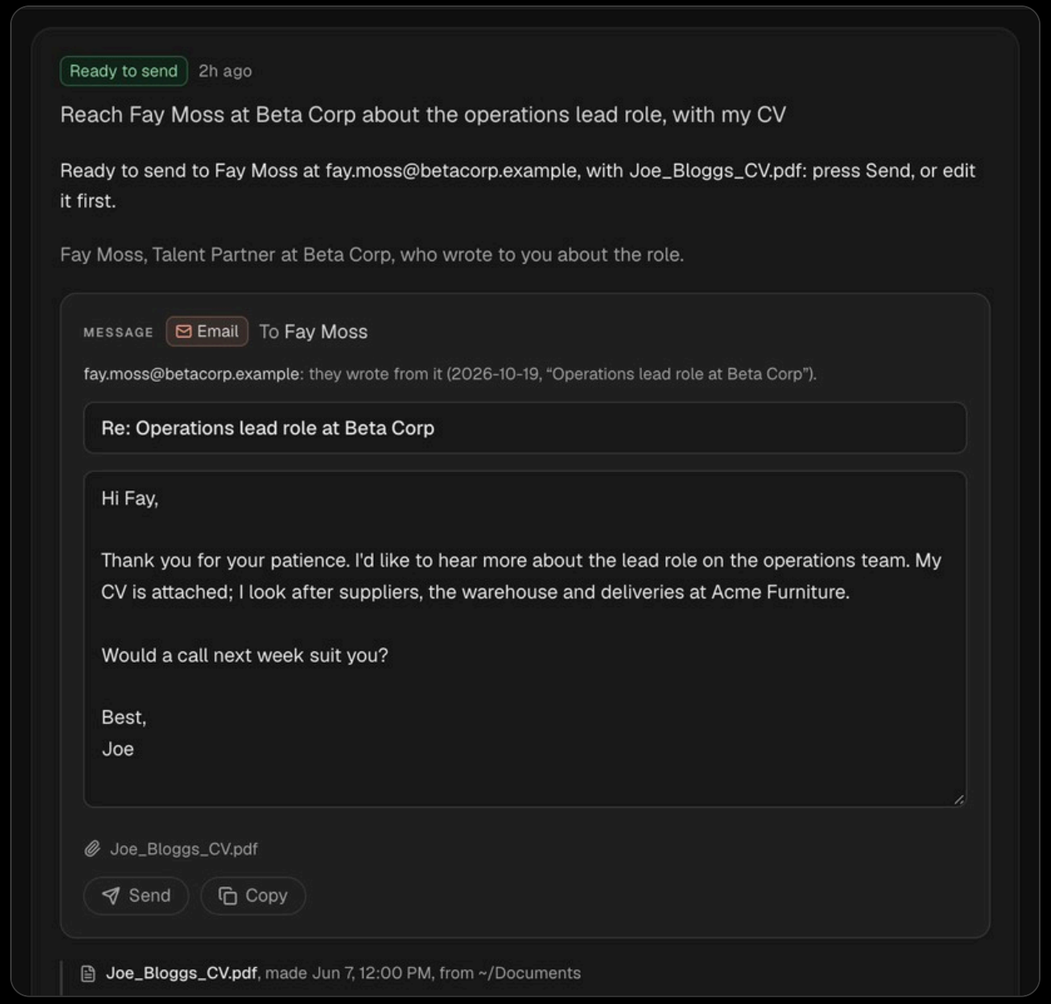

Compared 6m ago · from your mail and chats since Sep 4

Who	First step	The whole	Credited	Terms	Last contact	Still to ask
Northfield Home Repair Sam Ruiz	come and look, No charge	rebuild the back porch steps, $1,500 to $2,400 all in crew of two, $75 an hour materials, at cost	not said	none said	Oct 25 you owe a reply	a cap on the hours; whether the ballpark includes materials

Birch & Sons Builders Tom Birch	Estimates, free	taking out the old steps, new stringers and treads, the railing, and the town permit if one is needed, $2,650 Composite treads instead of pine, $3,100	not said	We ask for 50% up front and the rest when it's done our work has a two-year warranty We're booked until mid-December	Oct 19 you owe a reply	nothing

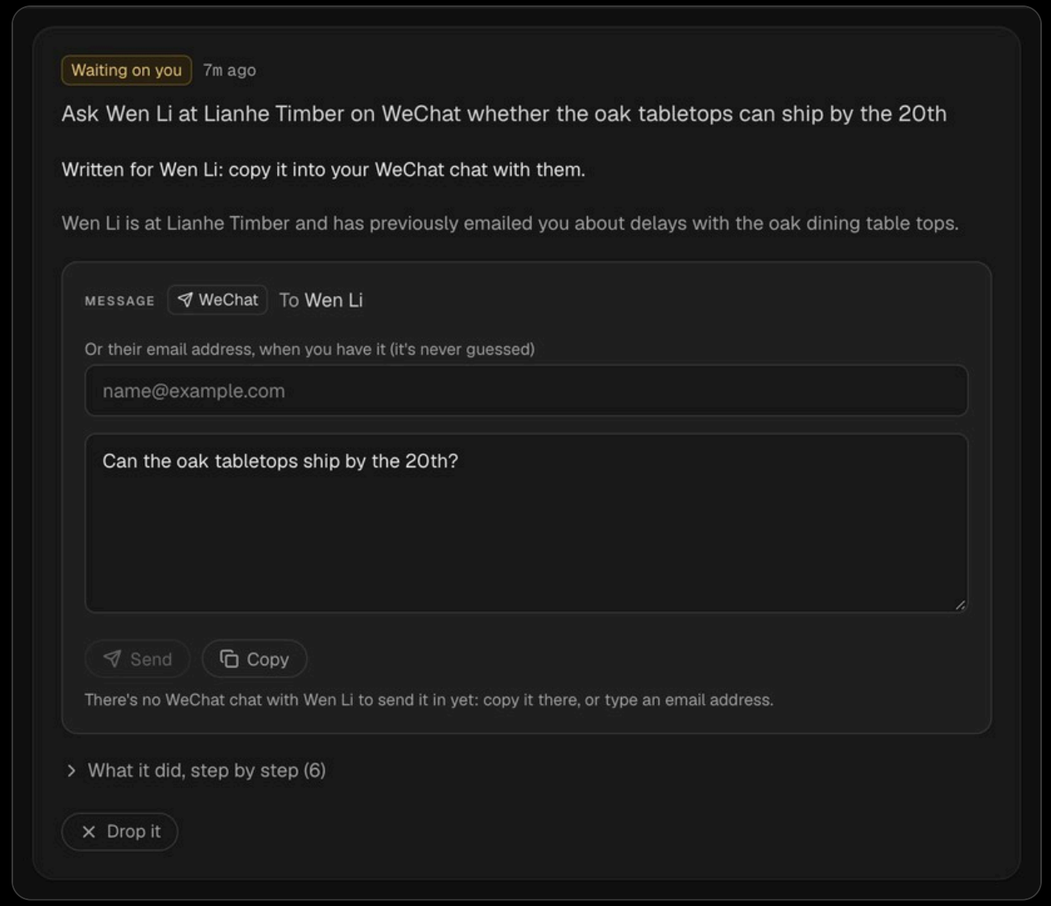

from their emails · every figure as they wrote it · a reply to each asking for what's missing, waiting for his Send

ERRANDS

One tap short of Send

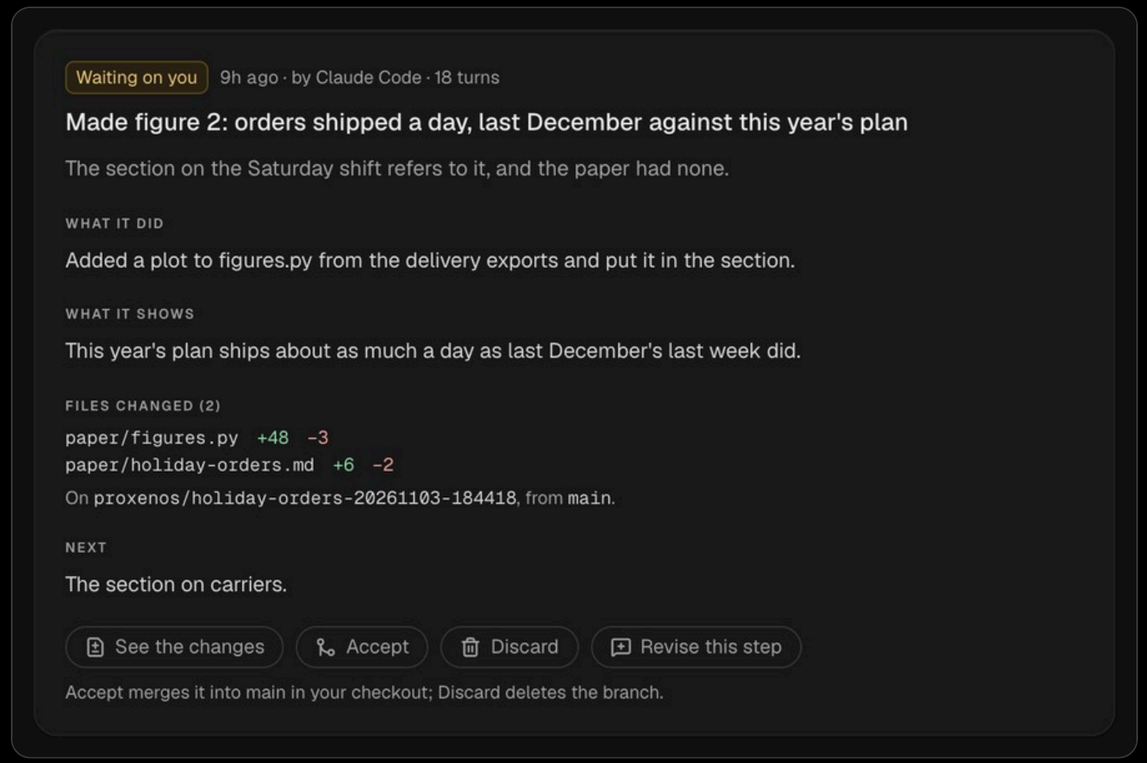

"Reach Fay Moss at Beta Corp, with my CV": her address from his mail, his newest CV, flagged as out of date

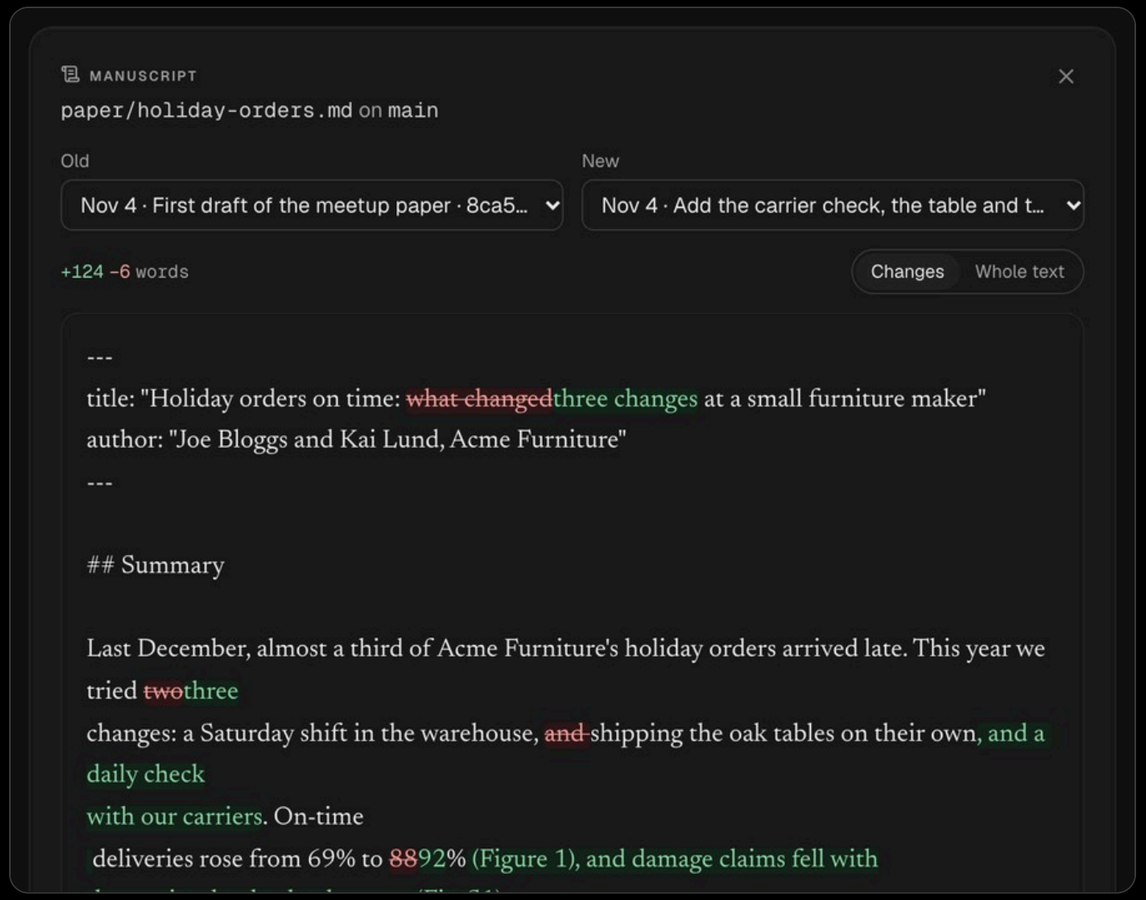

a WeChat message to his oak supplier, written short, for him to paste there

no address in his records? it looks on the organization's own pages, and never guesses

His paper moves while he sleeps

a step on its own branch: Accept merges it, Discard deletes it

every version of the manuscript, the changes marked word by word

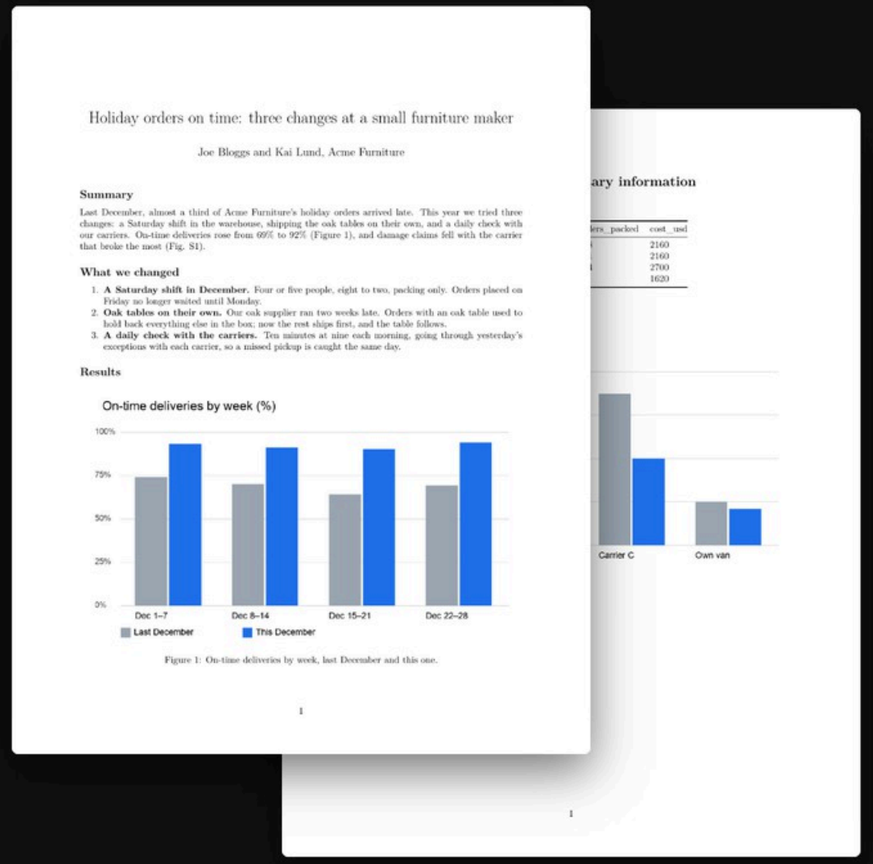

where each project stands, from his messages and its code on every branch · nothing is pushed

Every night, a folder in his Drive

Projects / Work / **Holiday orders on time**

- DOCX Holiday orders on time - manuscript.docx
- PDF Holiday orders on time - manuscript.pdf
- DOCX Supplementary information.docx
- PDF Supplementary information.pdf
- DIR Supplement
  - PNG FigS1_damage_by_carrier.png
  - CSV tableS1_saturday_shifts.csv
- DOCX Where it stands.docx
- DOCX About this project.docx
- DOCX About this folder.docx

The Word file and the PDF are `paper/holiday-orders.md` at `c2a770c` on main, so the two match.

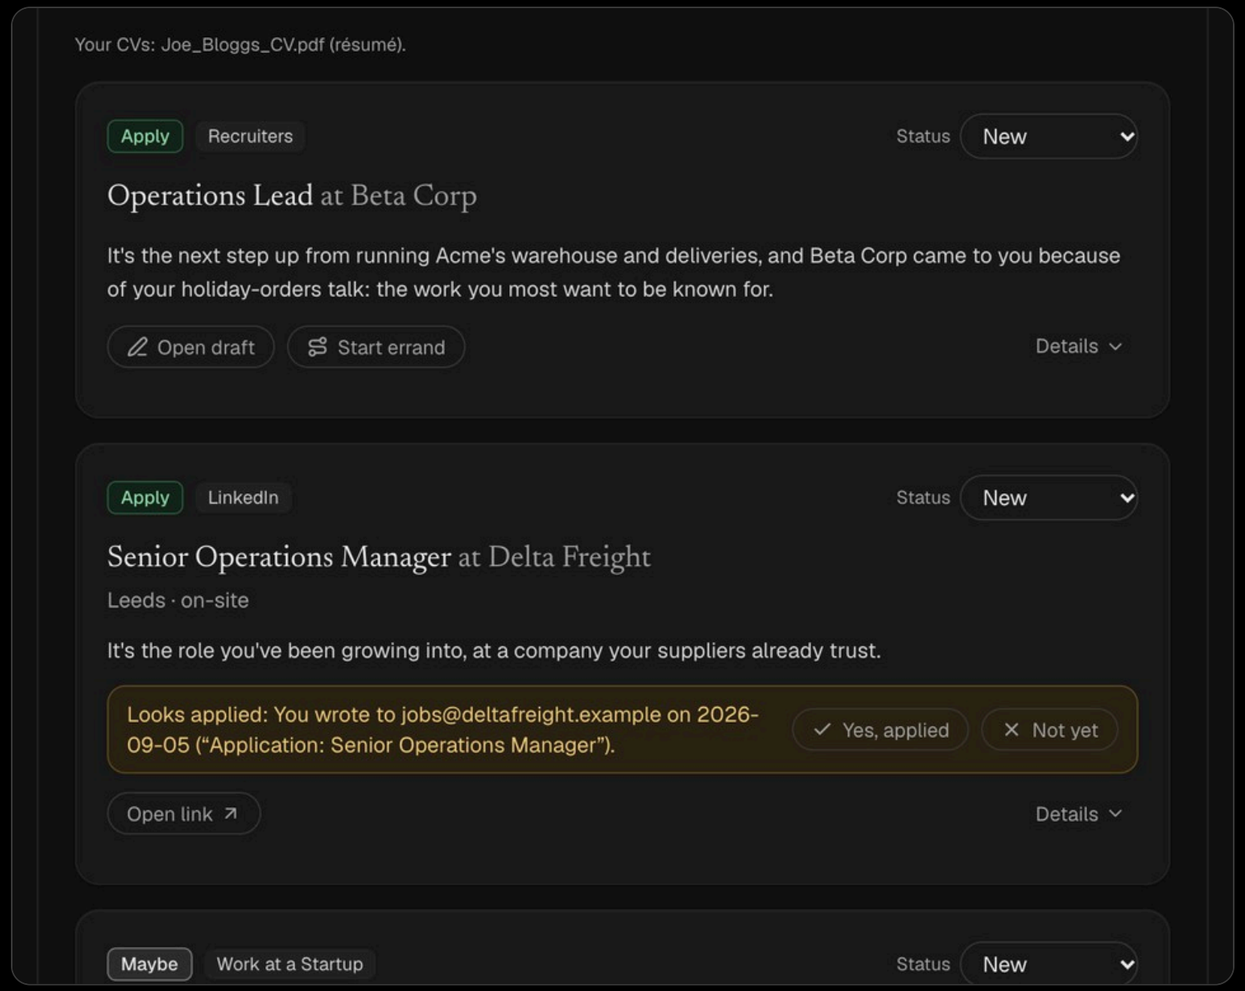

the manuscript as Word and as a PDF, made from the same commit · a supplement of the tables and figures it names

co-authors' comments in Word come back as a step · projects in groups, each with a brief · Google Drive, Dropbox, OneDrive or iCloud

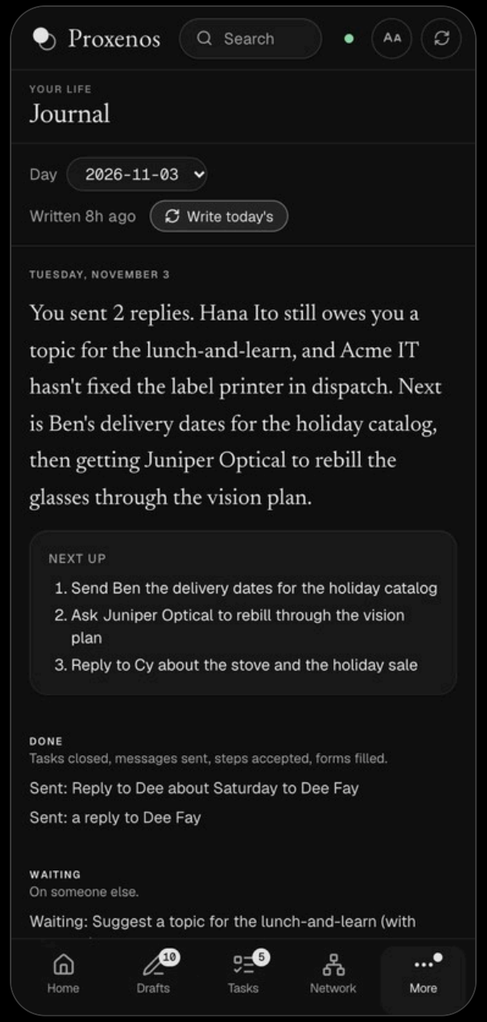

JOBS

Every lead, with whether to apply

- from LinkedIn's alerts, recruiters, Work at a Startup and job boards, each job once
- whether to apply and why, and the CV that fits
- whom to contact, with a first message drafted
- it spots applications already in his sent mail, and asks first

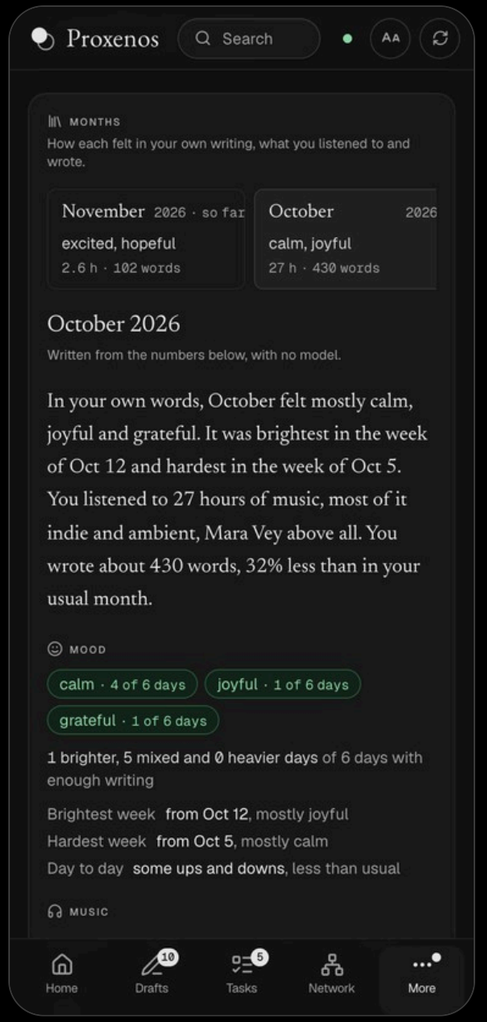

His days, months and weeks

Journal: each day written down, and what's next

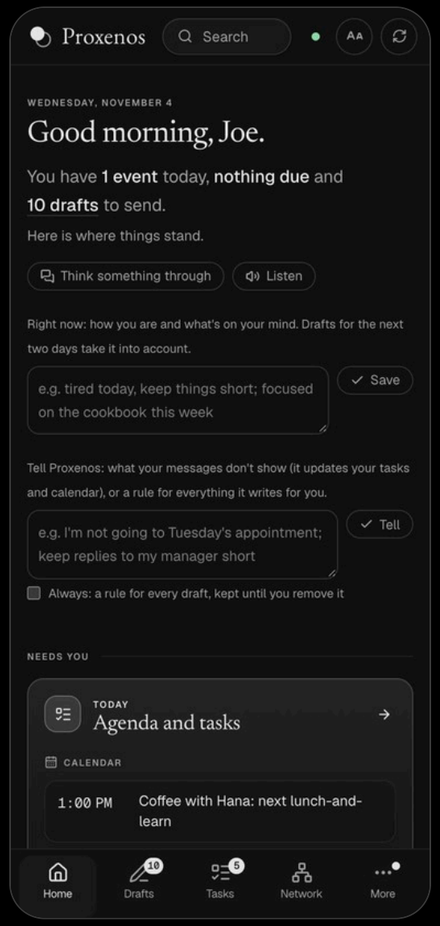

Life: each month in his own voice, his to correct

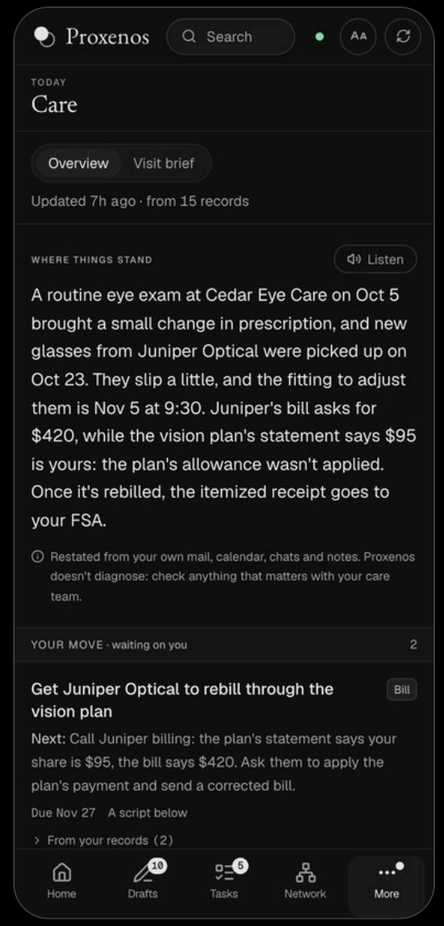

Rhythms: his weeks side by side, past months too

On his phone, too

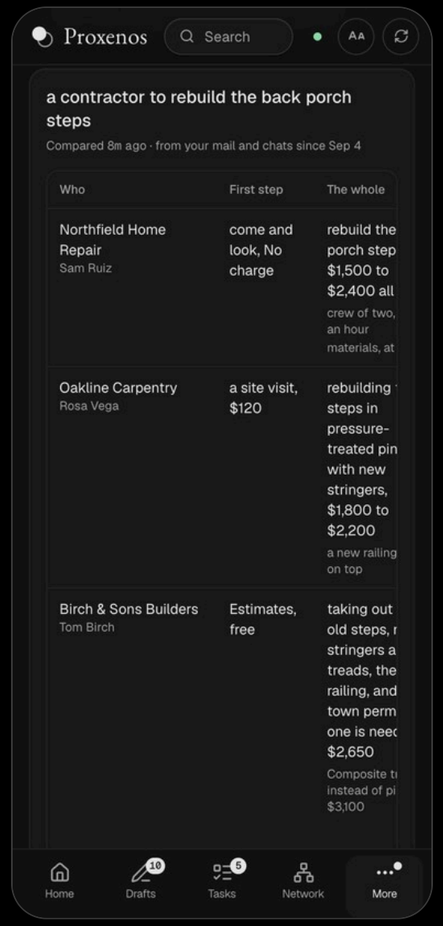

over his own Tailscale · a notice when more waits on him, with counts only

stays on his computer

- the vault, and keys in the system's own store
- every prompt, with a model on his computer

leaves, and when

- with Claude, under his key: what each part needs, card numbers and passwords blanked
- or only what he waits on: Ask, Think, errands, calls
- a name and an organization, to find a public email address

every model call is logged, never its words · the Privacy view shows the last 30 days

It drafts. You press send.

Nothing sends itself

an outbox per app, off by default, and only for an app whose drafts went out nearly unchanged many times

Calls he starts

it waits on hold, says it's an automated assistant, and never agrees to pay

Left to him

ID numbers, account numbers and signatures on a form; and it never guesses an address

he copies a draft, or opens it in its app with the text filled in, and presses send himself

once his reply shows up in that chat, the draft is marked sent, and his edits teach the next one

How Proxenos compares

	DATA LIVES	READS	ACTS OR DRAFTS	MODEL OF YOU	CHECKS IT'S LIKE YOU
Proxenos	your computer, plain files	mail, chats, calendars, notes, documents, health records: about 30 sources	drafts; you press send	a written self-model you read and correct	yes: drafts against what you sent; blind picks between models
Odysseus, Open WebUI	your machine or server	files you add, the web; an inbox and calendars (Odysseus)	acts: agents with tools and MCP	memories from your chats	no
Khoj	your server, or Khoj's cloud	your notes and documents, the web	answers; research on a schedule	long-term memories	no
Screenpipe, Recall	your computer	your screen; Screenpipe also audio and input	scheduled pipes; search	no	no
OpenClaw	your computer	your chats on WhatsApp, Telegram, Slack, iMessage	acts on a schedule, with tools	MEMORY.md and USER.md	no
Mem0, Letta, Zep	where a developer runs it	what an app passes it	no: memory for other agents	facts about a user	recall benchmarks, not likeness
ChatGPT, Claude	the vendor's cloud	your chats; Gmail, Calendar, Drive once connected	acts, mostly asking first	saved memories you can edit	no
Second Me	your computer	notes and files you give it	answers as you	a model trained on you	partly: a model judged it

only Proxenos does all four at once: your whole record, on your computer · a self-model you can read · drafts in your voice · measured against what you sent

others do more of some things: fuller workspaces, everything on screen, no setup at all · checked against each project's own pages, Nov 3, 2026

Where it stands

MIT

free and open source

1,123

tests, on macOS and Windows, every push

83,000

lines of Python, TypeScript, Swift and JavaScript

Nov 3

the desktop app's first release, 2026

today

- the desktop app for Mac and Windows: one download, unsigned for now
- from source on a Mac: one command
- used every day by its first user

next

- a preprint on Proxenos as a tool, coming soon
- a signed app your computer trusts on first open
- sign in to Google, Microsoft, Slack and others with no developer account
- a small local model in the box
